Evan (Fnu) Yibole

+1 (202) 439-7565 | fyibole@gmu.edu | LinkedIn | GitHub

EDUCATION

George Mason University *Fairfax, VA*
B.S. in Computer Science *Expected May 2029*
GPA: 3.82/4.0

Relevant Coursework: OOP, Discrete Math, Data Structures & Algorithms, Web Programming, AI Engineering 301 (Codepath)
Activities: Google Developer Student Club, Game Development Club, AugieHack, Intervarsity, Wajo Hackathon, Leetcode club

EXPERIENCE

Software Engineering Intern — Knobull, Inc knobull.com *Remote | May 2026 – Aug 2026*
React, TypeScript, Node.js, Python, Supabase (pgvector), REST APIs, Git

- Improved frontend accessibility and mobile responsiveness by adding ARIA attributes (aria-label, aria-expanded) to navigation and form components and implementing responsive breakpoints for mobile layouts.
- Built a data ingestion pipeline in Python that chunks course text and generates embeddings with a locally-hosted Sentence-Transformer model, storing results in Supabase/pgvector to power downstream search.
- Developed a hybrid search API combining semantic (embedding-based) and full-text search via Reciprocal Rank Fusion, served through an Express backend using a locally-hosted Hugging Face embedding model.

Co-Founder & Operations Lead — Keta Online Shop *Feb 2023 – May 2025*

- Co-founded and operated an online clothing shop serving Mongolia's youth market for over two years, fulfilling ~20 orders per month and generating ~$600 in monthly revenue through direct product sourcing from China.
- Led a three-person team across customer service, Instagram marketing, and delivery while managing end-to-end cross-border operations, including supplier coordination, inventory procurement, shipping, fulfillment, and compensation.

PROJECTS

SyllaCal | *Oct 2026 – Present* | GitHub
Java, Spring MVP, Spring Boot, Maven, TypeScript, React, PDFBox, Docker, AWS EC2, Amazon ECR

- Built a Spring Boot API that extracts text from a syllabus PDF with Apache PDFBox, asks Gemini for assignment, quiz, and exam dates, and returns an .ics file for Google Calendar, Apple Calendar, and Outlook.
- Built a React review page where students edit, add, and delete extracted events, then export the reviewed list without sending the PDF or calling the model again.
- Validated uploads and extracted dates, covered the preview and export paths with Spring MVC tests, cut the Docker image from 1.02 GB to 531 MB with a multi-stage build, and deployed it to AWS EC2 with GitHub Actions running the test suite.

AveLoop | *Wajo Hackathon, San Francisco, CA (remote participation)* | *Oct 2026* | Live Demo
Next.js, React, Clerk, Supabase, LLM API, Google Cloud Text-to-Speech, TypeScript

- Built the discharge-note parser, the review screen, and the Fo MCP integration, joining remotely. The parser pulls medications, follow-ups, and warning signs from a note or photo, and the user confirms dates before the plan moves on.
- Connected the approved plan to Fo, an AI voice-agent platform, through the Fo MCP, so the agent can set medicine reminders, confirm a clinic, call the pharmacy or clinic, and read the plan aloud.

AvelaMed | *AugieHack - Health Track* | *April 2026* | Live Demo
JavaScript, React, Node.js, Express, Supabase, Google Cloud Text-to-Speech, LLM API

- Earned **Honorable Mention** in the health-focused track at AugieHack for a full-stack healthcare web application with a multi-page patient/results workflow.
- Contributed to backend development and collaborated with teammates on UI design and core user workflows.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML/CSS, Java
Frameworks & Libraries: React, Node.js, Express, Passport.js, sentence-transformers, Next.js, JUnit, Spring
Databases: MongoDB, Supabase (pgvector), PostgreSQL
Tools: Git, GitHub, REST APIs, Vercel, bcrypt, OAuth, AWS, Gemini API, Docker, Clerk, Kubernetes, Kafka, .Net, Git Actions
